

THERMALDRY®
ELITE
PLANK FLOORING

If You Want the Warm Look
of Wood In Your Basement,
We Have Just What You Need!

Real wood should never be installed on a basement floor because it absorbs water vapor from the concrete slab and swells, gets moldy and rots. One plumbing leak will ruin your wood floor in minutes.

Our NEW ThermalDry® Elite Plank Flooring has no wood at all, and will not be affected by moisture or water in any way, giving you that luxurious look you want without the worry!

Attractive Modular Design

The ThermalDry® Planks are 4" wide x 36" long modular tiles that lock together. They have raised pegs on the bottom that suspend them above the cold, hard, damp concrete floor, allowing your floor to breathe. Water vapor does not get trapped underneath your finished floor. If there is a leak, the ThermalDry® Elite Plank Flooring can easily be removed, dried out, and reinstalled without having to be replaced with new planks.

The bottom side of planks have raised pegs that prevent water vapor from getting trapped, eliminating the cause of odors and mold.

THERMALDRY® ELITE PLANK FLOORING FEATURES:

- Provides a luxurious wood plank look, design and feel.
- Is inorganic and water resistant, will not grow mold, rot, or buckle.
- Gives a thermal break from the cold concrete slab, making the surface temperature up to 10 degrees warmer.
